

Yonder is a documentation solution provider with its roots in the aviation industry, but now serving a wide range of B2B/enterprise customers. With our SaaS product, we help companies stay in control of their content and bring reliable, role-specific information to frontline employees.

With just over 20 employees, your work has a direct impact on the success of the company, so we are looking for team members who love working on a product and live by the mantra of getting stuff done.

To strengthen our development team, we are looking for a

Backend / Full-Stack Developer (80-100%, m/f/d)

As part of the development team for our cloud-based content management solution, you will work with modern technologies in a small and agile team.

If you like to shape a young product in a fast-paced environment, you will feel right at home with us. Despite working in a structured manner, you can handle a grain of chaos that comes along with fast growth.

What we offer

- Flat hierarchies and transparent decision-making
- We value everyone's inputs and ideas, but expect to implement them yourself
- Blame-free error culture inspired by aviation
- Modern offices located in Zurich Oerlikon, just a few minutes by train from downtown Zürich
- Flexible working hours, with possibility to work from home – or anywhere else for that matter
- Bring your own device: You decide what you want to work on, we add 100 CHF to your monthly net salary

Duties and Responsibilities

- Design, implement, test and ship new features for our cloud-based solutions
- Take ownership and drive development of key components of the application
- Help address and resolve issues to ensure the best possible customer experience
- Your input and experience will help keep our software state-of-the-art

Qualification Requirements

- Relevant education and at least 3 years of experience working as a full stack developer
- Strong commandment of backend development using Java or Kotlin and Spring Boot

- Experience with CI builds and tools such as Gradle/Maven, Git and Docker
- Some experience with frontend development using React/Redux and JavaScript (TypeScript).
- Some experience with relational and/or document-based databases
- Any experience with cross-platform mobile or desktop app development (Windows, iOS, Android) is an additional advantage
- Previous experience with B2B/Enterprise SaaS is a nice-to-have
- Self-motivated and able to work independently with little direct supervision
- Excellent abstract thinking and good communication skills
- Fluent in English (German is an advantage)
- Ability to work in our Zurich office on a regular basis

We do not expect you to be an expert in all technologies and equally strong in all parts of the stack, but we would expect you to have strong expertise with at least one part of the stack and be willing and ready to work and learn with the team on all parts of the solution.

If you are a full-stack engineer with a passion for learning and building cloud-based B2B solutions, this is the perfect opportunity for you to be part of a growing young company. Interested? Please contact hr@yonder.info for details.
